

April 8, 2020

Mr. Phil Keith, Chairman
The Presidential Commission For Law
Enforcement and Administration of Justice

Mr. Chairman,

We write you today in respect for the great responsibility you shoulder as Chairman of the Presidential Commission for Law Enforcement and Administration of Justice. Our purpose is to assist your assessment and immediate furtherance of a topic under exploration by the Technology Working Group; *Location Based Services*.

All of the undersigned have had national leadership responsibilities for Preparedness and Response during our careers. We certainly understand the gravity of effective and decisive action, based on the best information available at the time. The advancement of processes utilizing "pairing" technologies or Smart Grid Logistics, will enable that actionable information and revolutionize the Delivery of Essential Emergency Services during and after the COVID-19 Pandemic.

This premise became the justification narrative for Congressman Paul Gosar last month as he submitted an Appropriations Request for \$25M to establish a new Critical Infrastructure in America. The Resource to Emergency, or R2E Critical Infrastructure (See Attached).

As a member of your Technology Working Group, Chief of Police John Ortolano has a strong handle on this innovation and can expand on the details for you.

We strongly recommend that you exercise the latitude of your position as Chairman and further this to Attorney General Barr immediately. America needs the real time tracking and management of every Emergency Service it can marshal during this unparalleled challenge for our President, and the citizens whose lives are in his hands.

The Honorable Dr. Richard Carmona
17th U. S. Surgeon General

Maj. Gen. Donald W. Shepperd
USAF, Retired
Former Director Air National Guard

The Honorable George W. Foresman
1st DHS Under Secretary of Preparedness
